### Feature

### Benefit

---

#### Converts paper into electronic data

- Quality scans of claim/auth forms
- Cutting edge Optical Character Recognition
- 15-20x faster data entry

**Save time and minimize errors as ScanClaims converts claims and authorizations from standard paper/faxed forms to electronic data and loads them into your core system.**

---

#### Files and indexes images

- Claims/auths automatically filed/indexed
- Data is sorted, inventoried, and reported
- Auth requests are tracked and routed

**No need to store paper documents offsite and eliminate misfiled paper documents. Data is securely backed up. Easily monitor inventory levels and record historical productivity.**

---

#### Retrieves document images

- Searchable index of document images
- Any combination of search fields accepted
- Quick document image retrieval

**Quickly retrieve scanned documents by member name or ID, date of service, provider, health plan, claim/auth #, or other identifiable index for analysis and audits.**

---

#### “Scrubs” member & provider data

- Claim and auth data validated
- Member & provider data is corrected
- “Scrubbed” claims pending for review

**Eliminate tedious research by automatically identifying and resolving eligibility issues due to non-matching patient name, DOB, and member ID, billing provider info, etc.**

---

#### Adapts to unique business needs

- Core transaction system integration
- Documents from various sources accepted
- Any standardized form can be indexed

**Integrate ScanClaims data and image management with your current core transaction system to scan, image, index, and archive any type of standardized document.**
